RFID based Laptop Tracking

Organizations having multiple entries / exits have a tough time to ensure unauthorized persons do not walk away with a company Laptop

It would not be practical to stop every employee at the gate to ensure he / she is not carrying a company Laptop that is not allocated to him/her – *just imagine the long queues!*

Laptop Tracking System is a RFID based, multi-processing solution which helps maintain track of Laptop movements within the organization to ensure no un-authorized person walks way with a company laptop.

Laptop Tracking System helps organizations maintain control over movement of their Laptops

Asset Tracking System has two distinct functions:
❖ Identification and tagging of Assets
❖ Tracking of Laptop movements

Tracking of Assets movements occur on a 24x7x365 basis and each instance of Asset movement is recorded

At each instance of an exception during Asset movement, alarms are triggered at concerned locations for prevention or double-checking of such movement exceptions

Analytical and informative reports are generated from the Asset Tracking database to assist organizations gain control over their Assets

Features

Identification activities:
❖ Creating a master database of Laptops
❖ Creating a master database of Employees
❖ Assigning Laptops to Employees
    o Individual assignment
    o Group assignment

Transaction activities:
